Application No.: 10/574,831 Examiner: Carol M. Koslow

Art Unit: 1793

AMENDMENTS TO ABSTRACT

The abstract is amended to read:

The invention relates to a <u>composition for</u> coding having at least one pair of mutually associated luminescent substances having first and second luminescent substances which emit in a joint emission range located outside the visible spectral range. The emission spectra of the first and second luminescent substances overlap in at least a subrange of the stated emission range such that the emission spectrum of the first luminescent substance is complemented by the emission spectrum of the second luminescent <u>sub+stance</u> <u>substance</u>.
